

# Symantec™ Critical System Protection® on Red Hat® Enterprise Server 4.0®

ISV: Symantec

Solution Category: Security

Platform(s): Red Hat Enterprise Linux AS/ES v.4  
(x86 Intel Architecture)

Description of Recipe: Symantec™ Critical System Protection® provides policy-based behavior control and detection. The solution's agents control behavior by allowing and preventing specific actions. They detect this behavior by auditing and monitoring processes, files, log data, and registry settings which puts security-related events into context and allows appropriate measures to be taken.

Target Availability: Immediate

Target Usage Models: Security for Intel® Xeon® Processor Servers

Intel Confidential
